Research Profile

I am a geodesist and InSAR researcher specializing in SAR-based surface deformation monitoring and Earth observation. My research focuses on InSAR methodology, interferometric time-series analysis, network design, and error characterization, with an emphasis on reliable deformation measurements from satellite radar observations. I integrate InSAR with GNSS, remote sensing, geological, and hydrological data to investigate natural and anthropogenic deformation. I also apply machine learning and deep learning approaches to deformation modeling and environmental remote sensing.

Research Interests

- InSAR and SAR Remote Sensing
- Surface and Crustal Deformation Monitoring
- InSAR Time-Series Analysis, Network Design, and Error Characterization
- Geohazards and Natural & Anthropogenic Deformation
- Environmental and Climate Applications of Remote Sensing
- Machine Learning and Deep Learning for Geodesy and Earth Observation

Experiences

Education

- **M.Sc. in Geodesy**
  K. N. Toosi University of Technology, Iran | 2018
  Thesis: *A Feasibility Study on the Application of InSAR for Surveying in Open Pit Mines* [In Persian]
- **B.Sc. in Surveying Engineering**
  Eyn Ol Ghozat Higher Education Institute, Iran | 2016

Professional Experiences

- Research Collaboration - InSAR Applications | 2023-2024
  [Collaborated with Dr. Meisam Amani on InSAR-based investigations of landslides in New Zealand, dam deformation and shoreline changes in Canada, and open-pit mine deformation in South Africa]
- InSAR & GIS Consultant/Research Collaborator - Bonyan Zamin Co. | 2022
  [Prepared annual InSAR-based surface displacement maps of Isfahan, Iran, for Isfahan Municipality using Sentinel-1 data, PS-InSAR, GMTSAR, StaMPS, and QGIS]
- Military Service | 2019-2021
  [Served as a full-time conscript; continued independent research and technical writing during this period and authored a practical handbook on InSAR processing]

Awards & Honors

- Ranked 1st among B.Sc. students in Surveying Engineering [GPA: 3.93/4.00] | 2016

Skills

InSAR & SAR Remote Sensing

- SAR Data: Sentinel-1, ENVISAT, ALOS-1/2, ERS-1/2
- InSAR Methods: DInSAR, PS-InSAR, SBAS, NSBAS
- InSAR Processing: Multilooking, noise reduction, interferogram generation, network design and optimization
- Error Characterization & Correction: Atmospheric correction (ERA5, GACOS), filtering, phase-bias analysis
- Software & Processing Tools: StaMPS/MTI, GMTSAR, MintPy, ISCE, LiCSBAS, SNAP, DORIS, ROI_PAC

Geodesy & Geodetic Techniques

- Satellite Geodesy and Physical Geodesy
- GNSS: Dual-Frequency GNSS
- Levelling and Topographic Surveying
- Total Station and Nivo
- Surveying & Geospatial Software: Civil 3D, Global Mapper, RTKLIB

Remote Sensing & Environmental Applications

- Applications: Soil Moisture, Groundwater Storage, Precipitation, Land Cover, Air Pollution, Climate Change, Soil Erosion
- Data & Products: Landsat, Sentinel-1/2, MODIS, GRACE, Well Data, CHIRPS, TRMM, Sentinel-5P/TROPOMI

AI & Data Analysis

- Machine Learning: Random Forest, XGBoost, SVM, Linear Regression, Lasso Regression
- Deep Learning: RNN, LSTM

Programming & GIS

- Programming & Data Analysis: Python, NumPy, Pandas, Matplotlib
- GIS & Remote Sensing Platforms: QGIS, Google Earth Engine
- Operating Systems: Linux (Ubuntu)

Languages

- Azerbaijani: Native
- Persian: Native
- English: Professional Working Proficiency

Publications
